

ENV 6106

Air Pollution Modeling

Spring 2023

Project site

For through lanes, first 100 m starting from intersection as queue links, then 330 m beyond as running links

Median

35 m

- 1: Left turn: 150 m
- 2-4: Three through lanes
- 5: Right turn: 110 m
- 6-9: Four through lanes
- 10: Left turn: 30 m
- 11: Left turn: 50 m
- 12: Through & right turn
- 13: Right turn: 200 m
- 14: Through lane
- 15: Left turn, treat as through
- 16: left turn: 90 m
- 17-18: Through lanes

Maximum concentration may be at a different spot for Saturday home game peak hour vs. work week peak hour

28 m

X, Y (0, 0)

Fig: 1
Geometry of intersection
Alafaya Trail Blvd &
McCulloch St.

19: right turn: 100 m
20-22: through lanes
23: right turn: 140 m
24: right turn: 120 m
25-27: through lanes

Note: For this demo we did
not account for acceleration
lanes
